Art Unit: 1646

DETAILED ACTION

- 1. Amendment filed 1/24/07 has been entered. Applicant has amended claims 1, 4, 6, and added new claim 23. Claims 1 3-6, 14-15 and 23 are being examined as being directed to the elected invention. Claims 2, 7-13, 16-22 are either withdrawn or cancelled. Examiner rejections are recast below to address the amended claims. Applicants arguments have been fully considered but are not deemed persuasive to overcome the rejection of the amended claims as discussed below.
- 2. IDS filed 10/6/05 was considered on 8/15/06 but references AS22, AT22 and AR23 were not initialed. This was an oversight by the Examiner and references AS22, AT22 and AR23 have now been initialed as being considered and are attached with this Office action. References AR9, AR19 have been initialed again just to remove any ambiguity as to if they were considered or not.
- 3. The drawings remain objected to because Figure 2B is too dark and the figure is not legible. Applicants have filed new drawing on 12/22/06. Figure 2B is completely black and shows no data. Appropriate correction is required.

New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application for the reasons given above. Applicant is advised to employ the services of a competent patent draftsperson outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

- 4. a) The amendment filed 12/28/06 is objected to because it does not include the statement "the sequence listing information recorded in computer readable form is identical to the written (on paper or compact disc) sequence listing" and, where applicable, includes no new matter, as required by 37 CFR 1.821(e), 1.821(f), 1.821(g), 1.825(b) or 1.825(d). A statement that the sequence listing information is identical is required. Further to replace the existing sequence with that filed 12/28/06 a statement to that effect is required.
- b) A partial copy of the sequence listing on the CRF is attached. The CRF contained errors which were corrected by STIC, see attached "RAW SEQUENCE LISTING" (Appendix 1).

Claim Rejections - 35 USC § 112, second paragraph

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 1, 3 -6, 14-15 and 23 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim is indefinite because of the use of the phrase "nucleotide sequence corresponding to". It is suggested to overcome the rejection Applicants amend the claim to "nucleotide sequence set forth at". Further, claim I is indefinite because it is not clear how the polynucleotide binds afadin or actinin. It is suggested to overcome the rejections the claim be amended as follows:

1. An isolated and purified polynucleotide selected from the group consisting of:

- (a) a polynucleotide encoding a protein comprising the amino acid sequence of SEQ ID NO: 2;
- (b) a polynucleotide comprising the nucleotide sequence set forth at of corresponding to position 80 to 1924 in SEQ ID NO:1; and
- (c) a polynucleotide comprising the nucleotide seguence with at least 95% homology to the nucleotide sequence set forth at corresponding to position 80 to 1924 in SEQ ID NO: 1, wherein the polynucleotide encodes a polypeptide which binds which have the binding activity to afadin and/or actinin.

Claim 6 is rejected because it is broader in scope than the base claim from which it depends.

Claims 3 -5, 14-15 and 23 are rejected for depending on an indefinite base claim and fail to resolve the issued raised above.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

6. Claim 6 is rejected under 35 U.S.C. 1 12, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant ad that the inventors), at the time the application was filed, had possession of the claimed invention. The claim is drawn to:

An isolated and purified polynucleotide, which comprises at least 15

Art Unit: 1646

nucleotides of claim 1.

The claims, as written, encompass polynucleotides, which vary substantially in length and also in nucleotide composition. The instant disclosure does not adequately describe the scope of the claimed genus, which has insufficient structural limitations to correspond to the functional limitations. The claims encompass a substantial variety of subgenera including derivatives, allelic variants, chimeric constructs, fusion constructs etc. which may not even contain the critical structural feature of the invention contained in the afadin, actinin α or actinin β binding domain of ADIP.

The specification discloses a polynucleotide (SEQ ID NO:1) encoding a polypeptide (SEQ ID NO:2) which binds afadin, α -actinin-1 or α -actinin-2, wherein the polypeptide comprises the afadin, actinin α or actinin β binding domain disclosed in Figure 3A. The specification also discloses truncated polynucleotide of SEQ ID NO:1 encoding truncated polypeptide SEQ ID NO:2 which binds afadin, α -actinin-1 or α -actinin-2, wherein the polynucleotide comprises the afadin, actinin α or actinin β binding domain disclosed in Figure 3A. The specification is enabled for polynucleotide encoding polypeptide which bind afadin, α -actinin-1 or α -actinin-2, wherein the polypeptide comprises the afadin, actinin α or actinin β binding domain disclosed in Figure 3A.

The critical feature of the invention as it relates structure to function is the afadin, actinin α or actinin β binding domain disclosed in Figure 3A. The structure is the domain contained in the polypeptide of SEQ ID NO:1, and the function is that said domain binds afadin, actinin α or actinin β . The structure has to be a

Art Unit: 1646

minimum length and composition. The critical feature of the invention as it relates to structure and function is not contained, for example, in a polynucleotide that is 15 nucleotides long as claimed in claim 6.

To provide evidence of possession of a claimed genus, the specification must provide sufficient distinguishing identifying characteristics of the genus. The factors to be considered include disclosure of compete or partial structure, physical and/or chemical properties, functional characteristics, structure/function correlation, methods of making the claimed product, or any combination thereof. As cited above many polynucleotide constructs, which combine specific structure to function, are enabled by the disclosure, the claims that do not, as indicted above, are not enabled.

Pertaining to the claim 6 there is no identification of any particular portion of the structure of the peptide of SEQ ID NO:2 that must be conserved for activity. Accordingly, in the absence of sufficient recitation of distinguishing identifying characteristics, the specification does not provide adequate written description of the claimed genus. The structural limitations in the claim are insufficient to define the genus claimed, which encompasses unrelated peptides.

Naming a type of material generically known to exist, in the absence of knowledge as to what that material consists of, is not a description of that material. When one is unable to envision the detailed constitution of a complex chemical compound having a particular function, such as a peptide or nucleic acid, so as to distinguish it from other materials, as well as a method for obtaining it, conception has not been achieved until reduction to practice has

Art Unit: 1646

occurred, i.e., until after the peptide or nucleic acid has been isolated. Thus, claiming all peptides or DNAs that achieve a result without defining what means will do so is not in compliance with the description requirement. Rather, it is an attempt to preempt the future before it has arrived. The claims recite a broad arbitrary structural relationship between the claimed polynucleotide sequence and the disclosed polynucleotide of SEQ ID NO:1. Therefore, unrelated peptides to SEQ ID NO:2 are encompassed by the claims.

Vas-Cath Inc. v. Mahurkar, 19USPQ2d 1111, clearly states that applicant must convey with reasonable clarity to those skilled in the art that, as of the filing date sought, he or she was in possession of the invention. The invention is, for purposes of the 'written description" inquiry, whatever is now claimed." (See page 1117.) The specification does not "clearly allow persons of ordinary skill in the ad to recognize that (he or she) invented what is claimed." (See Vas-Cath at page 1116). As discussed above, the skilled artisan cannot envision the detailed chemical structure of the encompassed genus of peptide, and therefore conception is not achieved until reduction to practice has occurred, regardless of the complexity or simplicity of the method of isolation. Adequate written description requires more than a mere statement that it is part of the invention and reference to a potential method of isolating it. The compound itself is required. See Fiers v. Revel, 25 USPQ2d 1601 at 1606 (CAFC1993) and Amgen Inc. v. Chugai Pharmaceutical Co. Ltd., 18 USPQ2d 1016.

One cannot describe what one has not conceived. See *Fiddes v. Baird*, 30 USPQ2d 1481 at 1483. In *Fiddes*, claims directed to mammalian FGF'S were

found to be unpatentable due to lack of written description for that broad class.

The specification provided only the bovine sequence.

Page 8

Therefore, only isolated polynucleotide of SEQ ID NO:1 encoding the amino acid sequence set forth in SEQ ID NO:2 but not the full breadth of the claims meets the written description provision of 35 U.S.C.112, first paragraph. Applicant is reminded that Vas-Cath makes clear that the written description provision of 35 U.S.C. 112 is severable from its enablement provision (see page 1 115).

7. Claim 1, and dependent claims 3-6, 15 and 23 rejected under 35
U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The added material which is not supported by the original disclosure is as follows: A) An isolated and purified polynucleotide comprising the nucleotide sequence corresponding to position 80 to 1924 in_SEQ ID NO: 1. B) An isolated and purified polynucleotide comprising the nucleotide sequence with at least 95% homology to the nucleotide sequence corresponding to position 80 to 1924 in SEQ ID NO: 1 which have the binding activity to afadin and/or actinin

There is no support in the specification for the species of polynucleotide comprising the nucleotide sequence corresponding to **position 80 to 1924 in**

SEQ ID NO: 1. There is no support in the specification for the species of polynucleotide comprising the nucleotide sequence with at least 95% homology to the nucleotide sequence corresponding to position 80 to 1924 in SEQ ID NO: 1 which have the binding activity to afadin and/or actinin.

Applicant is required to cancel the new matter in the reply to this Office Action or show support for such a construct.

8. Claim 6 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The added material which is not supported by the original disclosure is as follows: A)

"An isolated and purified host cell **transformed** with the polynucleotide of claim 1". There is no support in the specification for the host cell **transformed** with the polynucleotide of claim 1.

Applicant is required to cancel the new matter in the reply to this Office Action or show support for such a construct.

If applicant overcomes the written description rejection above then claims 1, 3-6, 15 and 23 will be rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for an isolated and purified polynucleotide selected from the group consisting of: (a) a polynucleotide encoding a protein comprising the amino acid sequence of SEQ ID NO: 2; (b) a polynucleotide

Art Unit: 1646

comprising the nucleotide sequence set forth at position 80 to 1924 in SEQ ID NO:1; and (c) a polynucleotide comprising the nucleotide sequence with at least 95% homology to the nucleotide sequence set forth at position 80 to 1924 in SEQ ID NO: 1, wherein the polynucleotide encodes a polypeptide which binds afadin and/or actinin;, vector comprising said polynucleotide, isolated host cell comprising said vector, method of using said cell to produce the enabled polypeptide of claim 1; and polynucleotide fragments of the polynucleotide of SEQ ID NO:1 which are of sufficient length to be used as specific hybridization probes to detect the polynucleotide encoding the polypeptide which binds afadin. actinin α or actinin β , wherein the polypeptide comprises the afadin, α -actinin-1 or α -actinin-2 binding domain disclosed in Figure 3C, does not reasonably provide enablement for other polynucleotides. The, specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims.

Based on the disclosure a person of ordinary skill in the art would, in light of the specification, be able to isolate polynucleotide encoding a polypeptide which binds afadin, α -actinin-1 or α -actinin-2, comprising the afadin, α -actinin-1 or α -actinin-2 binding domain disclosed in Figure 3C. A person of ordinary skill in the art , in light of the specification, would also be able to produce vector comprising the enabled polynucleotide and host cell comprising said vector and use said host cell to produce the enabled polynucleotide of claim 1.

The scope of the claims, which encompass other polynucleotides

Art Unit: 1646

encoding polypeptides not comprising the afadin, actinin α or actinin β binding domain disclosed in Figure 3C are not enabled by the disclosure. Further the scope of the claims, which encompass other polynucleotides encoding polypeptides comprising the afadin or actinin binding activity but structurally unrelated to the polynucleotide of SEQ ID NO:1 are not enabled by the disclosure. The specification, Figure 3A, discloses the critical structural regions of the polypeptide of SEQ ID NO:2 (ADIP) which is required for afadin, α -actinin-1 or α -actinin-2 binding. ADIP has been shown to bind afadin, α -actinin-1 or α actinin-2. The claims encompass variant polynucleotides which may have as little a 15 nucleotides in common with the polynucleotide of SEQ ID NO:1 and none of the afadin, α -actinin-1 or α -actinin-2 binding. Applicant has not disclosed how to use said variants. Variant molecules which are structurally unrelated to ADIP are encompassed by the claims. Although these molecules may bind afadin, actinin they may have physiological functions unrelated to the ADIP of instant invention. Applicant has not disclosed how to use said variant molecules. For example, Applicant has not shown how to use variant polynucleotides comprising 15 nucleotides that hybridize to the polynucleotide of SEQ ID NO:1. Said variant polynucleotides comprising 15 nucleotides may be not even contain the critical feature of the invention as it relates structure to function.

Clearly, a single disclosed sequence does not support claims to any polynucleotide comprising 15 nucleotides of SEQ ID NO:1. Due to the large quantity of experimentation necessary to make and use the variant

Art Unit: 1646

polynucleotides of claimed invention lacking with the critical feature of the invention as it relates structure to function, the lack of direction/guidance presented in the specification regarding the identification, purification, isolation and characterization of said variant polynucleotides, the unpredictability of the effects of mutation on the structure and function of variant polynucleotides (since mutations of SEQ ID NO:1 and 2 are also encompassed by the claim), and the breadth of the claim which fail to recite meaningful structural and functional limitations, undue experimentation would be required of the skilled artisan to make or use the claimed invention in its full scope.

The rejections of record under 35 U.S.C. 112, first paragraph are maintained for reasons of record as they apply to the amended claims. Claims 1, 3-6, 15-18 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for an isolated polynucleotide encoding a polypeptide which binds afadin, α -actinin-1 or α -actinin-2, wherein the polypeptide comprises the afadin, actinin α or actinin β binding domain disclosed in Figure 3A, vector comprising said polynucleotide, isolated host cell comprising said vector, method of using said cell to produce the enabled polypeptide of claim 1; and polynucleotide fragments of the polynucleotide of SEQ ID NO:1 which are of sufficient length to be used as specific hybridization probes to detect the polynucleotide encoding the polypeptide which binds afadin, actinin α or actinin β , wherein the polypeptide comprises the afadin, α -actinin-1 or α -actinin-2 binding domain disclosed in Figure 3C, does not reasonably provide enablement

for other polynucleotides. The, specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims.

Based on the disclosure a person of ordinary skill in the art would, in light of the specification, be able to isolate polynucleotide encoding a polypeptide which binds afadin, α -actinin-1 or α -actinin-2, comprising the afadin, α -actinin-1 or α -actinin-2 binding domain disclosed in Figure 3C. A person of ordinary skill in the art , in light of the specification, would also be able to produce vector comprising the enabled polynucleotide and host cell comprising said vector and use said host cell to produce the enabled polynucleotide of claim 1. The rejection is the same as disclosed in the prior office Action.

Prior Art Rejections

Applicants argue the prior art references do not disclose the nucleotide sequence with at least 95% homology to the nucleotide sequence corresponding to position 80-1924 in SEQ ID NO:1. Applicant's arguments have been fully considered but they are not found persuasive. The following rejections are maintained. As seen by the sequence comparisons the polynucleotide sequence shown have at least 95% homology to the nucleotide sequence corresponding to position 80-1924 in SEQ ID NO:1..

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Application/Control Number: 10/644,084 Page 14

Art Unit: 1646

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in

the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United

States and was published under Article 21(2) of such treaty in the English language.

11. Claims 1,3, 4, 6, 15-18 are rejected under 35 U.S.C. 102(b) as being

anticipated by The RIKEN Genome Exploration Research group Phase II Team

and the FANTOM Consortium (Nature, Vol. 409, pages 563-690, February 8,

2001)

The RIKEN Genome Exploration Research group Phase II Team and the

FANTOM Consortium (Nature article, also see attached sequence comparison)

disclose a polynucleotide, which has 99.4% guery match and 99.9% identity to

the polynucleotide of SEQ ID NO:1. Also disclosed are vector comprising said

polynucleotide and cell comprising said vector. The disclosed polynucleotide

encodes a polypeptide that inherently binds afadin and/or actinin, absent

evidence to the contrary.

Therefore the disclosure of the RIKEN Genome Exploration Research

group Phase II Team and the FANTOM Consortium meets the limitations of

claims 1,3, 4, 6, 15-18, absent evidence to the contrary.

12. Claims 1,3, 4, 6, 15-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Carninci et. al. (Genome Research, Vol. 10, pages 1617-1630, 2000)

Carninci et. al. (also see attached sequence comparison) disclose a polynucleotide, which has 99.4% query match and 99.9% identity to the polynucleotide of SEQ ID NO:1. Also disclosed are vector comprising said polynucleotide and cell comprising said vector. The disclosed polynucleotide encodes a polypeptide that inherently binds afadin and/or actinin, absent evidence to the contrary.

Therefore the disclosure of Carninci et. al. meets the limitations of claims 1,3, 4, 6, 15-18, absent evidence to the contrary.

COMMENT
            cDNA library was prepared and sequenced in Mouse Genome
            Encyclopedia Project of Genome Exploration Research Group in Riken
            Genomic Sciences Center and Genome Science Laboratory in RIKEN.
            Division of Experimental Animal Research in Riken contributed to
            prepare mouse tissues.
            Please visit our web site for further details.
            URL:http://genome.gsc.riken.jp/

14. Claims 1,3, 4, 6, 14-18 are rejected under 35 U.S.C. 102(a) as being anticipated by Mammalian Gene Collection (MGC) Program team (PNAS, Vol. 99, pages 16899-16903), December 24, 2002)

MGC Program team (also see attached sequence comparison) disclose a polynucleotide, which has 99.9% query match and 99.9% identity to the polynucleotide of SEQ ID NO:1. MGC Program team also disclose the polynucleotide encodes a polypeptide that has 100% query match and 100% identity to the polypeptide of SEQ ID NO:2. The disclosed polynucleotide encodes a polypeptide that inherently binds afadin and/or actinin, absent evidence to the contrary.

Further disclosed is vector comprising said polynucleotide and cell comprising said vector. Therefore the disclosure of the MGC Program meets the

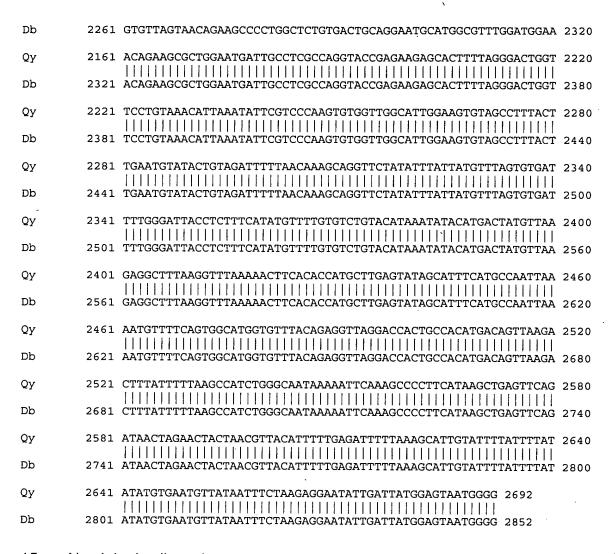

limitations of claims 1,3, 4, 6, 14-18, absent evidence to the contrary.

- No claim is allowed.
- 16. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory

Application/Control Number: 10/644,084 Page 31

Art Unit: 1646

period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Advisory

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nirmal S. Basi whose telephone number is 571-272-0868. The examiner can normally be reached on 9:00 AM-5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Nickol can be reached on 571-272-0835. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

RAW SEQUENCE LISTING ERROR SUMMARY PATENT APPLICATION: US/10/644,084A

DATE: 12/28/2006 TIME: 18:31:09

MJ.

Input Set : A:\2144.0100000_E1-X0202-USsq.txt
Output Set: N:\CRF4\12282006\J644084A.raw

#### Please Note:

Use of n and/or Xaa have been detected in the Sequence Listing. Please review the Sequence Listing to ensure that a corresponding explanation is presented in the <220>

to <223> fields of each sequence which presents at least one n or Xaa.

Seq#:3; N Pos. 2422

### Invalid <213> Response:

Use of "Artificial" only as "<213> Organism" response is incomplete, per 1.823(b) of New Sequence Rules. Valid response is Artificial Sequence.

Seq#:5,6,7,8
